

Application No. 10/805,175
Amendment "B" dated November 16, 2005
Reply to Office Action mailed October 4, 2005

AMENDMENTS TO THE SPECIFICATION

In the paragraph beginning on page 4, line 20, please insert the phrase as reflected in the following marked-up version of the paragraph:

The container wall 18 can have a front wall 18b, or front portion, oriented substantially vertical, and a rear wall 18c, or rear portion, oriented at an acute angle with respect to vertical. Thus, the goblet extends rearward, or is angled to extend rearward. Alternatively, the front wall 18b can be oriented to tilt slightly rearward. The goblet 10 can have an upper horizontal cross-section and a lower horizontal cross-section that are non-concentric. The upper and lower horizontal cross-sections can be horizontally off-set about their centers, or with respect to one another. The upper horizontal cross-section can be taken in a horizontal plane near the upper end of the goblet, while the lower horizontal cross-section can be taken in a horizontal plane near the bottom of the goblet. In addition, the upper edge 22 of the goblet, which as shown in Figure 1, and as noted above defines a plane, can be tilted to form an acute angle with respect to horizontal.
